MARKET4.0
CONNECT & PRODUCE

RELEASE DATE:

26 November 2021

MARKET4.0 marketplace for manufacturing is online

platform.market40.eu

Brussels, BELGIUM, November 2021 — [MARKET4.0 H2020](#) project announces the **online launch of the MARKET4.0 marketplace for manufacturing equipment and services**. It is an open multi-sided digital platform for enabling **production equipment and service providers** to connect and work together with **manufacturing companies**.

MARKET4.0 offers advanced capabilities on top of a user-centric web portal to support transactions and decision-making process during the procurement of complex products such as production equipment and services. **Industrial Data Space (IDS)** technology has been implemented and deployed for trusted data exchange. Simulation technologies such as **Augmented Reality** have been used for test-before-invest approach. Equipment **specific-purpose apps** are provided through the **MARKET4.0 Appstore** for configuration of products and services.

In the MARKET4.0 marketplace there are already a number of companies and technology providers in three (3) production equipment and services categories:

1. Metal Processing equipment (e.g. cutting, bending, machining)
2. Plastics and composites processing (e.g. injection molding)
3. High-tech production equipment (e.g. equipment for electronics manufacturing)

More domains are being setup in the marketplace (e.g. robotics).

Production equipment suppliers, manufacturing technology providers and manufacturing companies **can register to the marketplace, test its functionalities, and browse the products listed**.

MARKET4.0 project has received funding from the European Union's Horizon 2020 research and innovation programme under grant agreement no° 822064.
